No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

And E is located on chromosome 19 --Jackson, Bruns and Breslow, PNAS USA 81, 2945-2949 (1984) -- and is believed to be linked to the Apo C-II gene (see separate entry).

The two mutations causing type III hyperlipoproteinemia (apolipoprotein E phenotype E3/3) produces substitutions of Arg for Cys at amino acid Il2 and Cys for Arg at amino acid position 142.

Draft entry and printed copy of sequence for [1] kindly provided by L.L. Gill, University of Aberdeen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Apo E is a component of normal human very low density lipoproteinemia. Apo E is a component of normal human very low density lipoprotein. Structural gene, three of the common alleles being epsilon-4 epsilon-3 and epsilon-2. This sequence appears to be of the epsilon-3 allele. [1] argues that the apo E polymorphism involves mutations in the structural coding region; for example the epsilon-2 phenotype which is characterized by hyperlipoproteinemia is thought to result from a c to t change (arg to cys) at base 586 below [3], [5]. The sequence shown is 57% homologous with human apo har and 81% homologous with rat apo E. For the epsilon-4 sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5 (bases 577 to 624) (dill.L., Peoples, O.P., Pearston, D.H., Robertson, F.W., Humbhries, S.E., Cumming, A.M. and Hardman, N. Consortium/LINL at: http://image.llnl.gov Series: IRAL Plate: 6 Row: h Column: 23
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 4557324.

The invention also relates to compositions and methods for haplotyping and/or genotyphing the APOE gene. The haplotyping methods of the invention are useful for improving the efficacy and reliability of several steps in the discovery and development of drugs for treating diseases associated with APOE activity, e.g. familial.

C adent for treating a specific condition or disease predicted to be associated with APOE activity and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be associated with APOE activity. Genotyping or haplotyping methods are useful to screen for compounds targeting APOE to treat a specific condition or disease predicted to be associated with APOE activity. Genotyping or haplotyping methods are cuseful to screen for compounds targeting APOE to treat a specific condition or disease associated with APOE activity. The present sequence condition or disease associated with APOE activity. The present sequence is a cDNA encoding human APOE protein. APOE gene is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genotyping human apolipoprotein gene of individual for determining haplotype of individual, involves determining identity of nucleotide pair at specific polymorphic sites for two copies of gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAGGTGGAGCAAGCGGTGGAGACAGAGCCGGAGCTCGGGCTGCGCCAGCAGACCGAGTGG 114

The encoded protein is used to treat subjects who are deficient in apolipoprotein-E (or who produce abnormal forms of this molecule) and therefore are likely to suffer from hyperlipidemia, resulting in arteriosclerosis. It can also be used to raise antisera for detecting the protein deficiency or production of abnormal forms. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     594
                                                                                                                                                                                                                                                                    The invention relates to a new microarray which comprises probes for genes involved in psychoneuroendocrinimmune (PNI) activity. The microarray is useful in diagnosing a condition associated with PNI activity, such as CFS, type-2 diabetes, allergic condition, inflammation, cancer and infection. The present sequence represents a psychoneuroendocrinimmune gene expressed sequence tag. Note the specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           115 CAGAGCGGCCAGCGCTGGGAACTGGCACTGGGTCGCTTTTGGGATTACCTGCGCTGGGTG 174

The invention relates to methods for diagnosing and prognosing ovarian tumours in an individual via the detection and measurement of the expression of covarian tumour marker genes (ABA83103-ABA83162, ABA83180, ABA83181 and ABA83184) or segments thereof (ABA83103-ABA83162, ABA83180, ABA83181 and ABA83184) or segments thereof (ABA83103-ABA83169, ABA83181) and ABA83183). The methods of the invention are useful for assessing the relative severity of ovarian cancer, in prognostic tests for assessing the relative severity of ovarian cancer, in tests for conitoring a patient in remission from ovarian cancer, in tests for monitoring a patient in remission from ovarian tumour selected for ovarian tumour file. The methods can additionally be used to identify a particular tumour as serous cystadenoma, borderline serous tumour, serous cystadenoma, borderline serous tumour, mucinous cystadenoma, borderline serous tumour, mucinous cystadenoma, borderline mucinous tumour, mucinous cystadenoma, cystadenofibroma, adenofibroma and Brenner tumour. The ovarian tumour marker genes of the invention were identified tumour. The ovarian tumour marker genes of the invention were identified coverexpressed in a broad variety of ovarian epithelial tumour cells coverexpressed in a broad variety of ovarian epithelial cells. The marker genes are membrane implicated in immune response pathways, in the regulation of cell collised or secreted. In addition to their use as diagnostic and

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide gray acquences (TAT) nucleic acid comprising: (b) the full-length coding region of sequence (1a) (c) the complement of (a) or (b); (d) a sequence that has 80% (a). (c) the complement of (a) or (b) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above expression vector. (a) process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by the full-comprising: (a) an amino acid sequence encoded by the full-comprising at least 80% identical to (b); (s) a chimaric polypeptide; (c) a variety of the above polypeptide fused to a heterologous polypeptide; (d) a chimaric polypeptide; (e) an isolated antibody that binds to the above polypeptide; (d) a primaric polypeptide; (e) a composition of matter comprising the above polypeptide; (a) a chimaric polypeptide; (b) a tumour-associated antipody, oliopeptide or TAT binding organic molecule; in combination antibody, oliopeptide or TAT binding organic molecule, in combination (with a carrier; (11) an article of manufacture comprising a container and the growth of the cell is at least in part dependent upon a growth of potentiating effect of the above protein; (13) a method of inhibiting the above protein; (13) a method of chimarically treating a mammal having a cancerous tumour comprising the above protein; (14) a method of a tumour in a disperence of a protein in a sample suspected of containing the above protein; (15) a method of a tumour of protein, and (17) a method of binding an antibody, oliopeptide or a call that expresses the above protein; (14) a method of a tumour of protein, and (17) a method of binding an antibody, oliopeptide or a call that expresses the protein described above; (15) methods of dispension or activity of the above protein and (17) a method of binding an antibody, oliopeptide or a call that expresses the above protein 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            reventing or treating cancer. The composition is also used for preparing medicament for the therapeutic treatment or diagnostic detection of a sill proliferative disorder or cancer. The present sequence represents a
                                                                                                                        TAT; cytostatic; gene therapy;
                                                                               tumour-associated antigenic target (TAT) cDNA sequence #3836.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The composition and methods are useful for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TAT cDNA sequence from the present invention.
                                                                                                                     human; tumour-associated antigenic target; cancer; cell proliferative disorder; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 3836; 5504pp; English.

                         The present invention relates to an ApoE humanised mammalian cell. The present sequence is the coding sequence for human ApoE3, which was used in the metchod of the present invention. The ApoE humanised mammalian cell can be used for screening for agents useful for treating or preventing Alzheimer's disease and arteriosclerosis

The invention comprises methods of detecting the presence or absence of at least one allelic variant of a polymorphic region of a gene associated with cardiovascular disease. The invention specifically relates to detecting the region of a cytochrome C oxidase subunit VID (COX6B) gene that is associated with high serum cholesterol, or the region of the Necetylglucosaminy! Transferase component glycosylphosphatidylinositol-1 (GPI-1) gene that is associated with low serum high density lipoprotein (HDL). The methods of the invention are useful for detecting a predisposition to high serum cholesterol, low serum HDL and readiovascular disease. The methods are also useful for elucidating pathological pathways, developing diagnostic assays and new drug theraptes for such disorders. The present DNA sequence represents a human cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           414

The present sequence is a human apolipoprotein E (apoE) isoprotein, apoE3 DNA. The apoE lipoproteins are useful for lowering cholesterol, delaying the onset of atheroselerosis, treating or regressing atheroselerosis without inducing hypertriglyceridaemia, in a mammal lacking an endogenous, normally functioning apoE gene or low density lipoprotein (LDL) receptor or is at risk for developing atheroselerosis due to accumulation of lipoprotein remnants in the bloodstream or having a defect in remnant removal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GluValGlnAlaMetLeuGlyGlnSerThrGluGluLeuArgValArgLeuAlaSerHis 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New apolipoprotein E polypeptide and nucleic acid, useful for lowering cholesterol, delaying the onset of or treating atherosclerosis in mammal, without inducing hypertriglyceridemia.

The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and antigen presenting cells (APCs). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (MI) a tumouricidal immunocyte population in vivo in a mammal (by allowing tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycolipids, sphingolipids, glycosphingolipids, phosphosphingolipids, gangilosides, sialylated glycans, lipopeptides and proteoslycolipids are inactivated or deleted), a construct useful in the treatment of cancer comprising a superantigen (SMS) nucleotide inserted into a virus, a mammalian T cell
                                                                          260
                                                                                                                                               280

cc receptors for the lipids are inactivated or deleted to produce a tumouricidal immunocyte population, and administering the tumouricidally activated immunocytes to the host), producing (M3) a tumouricidal lipid to population ex vivo in a mammal (by allowing a tumour associated lipids are inactivated or deleted to produce a tumouricidally activated population, and administering APCs to the host), producing a tumouricidal T cell contact T cells, in which adaptor proteins, which inhibit T cell cativated to produce a tumouricidal population of T cells, in which adaptor proteins, which inhibit T cell activated to produce a tumouricidal population of T cells, and administering the tumouricidally activated T cells to the host, or allowing a superantigen-lipid raft to contact T cells to the host, or allowing a superantigen-lipid raft to contact T cells to the host), treating (M5) cancer in a mammal (by administering a lipid binding molecule which binds immunosuppressive tumour associated lipids in vivo, producing (M5) cancer in a mammal (by administering a lipid sin vivo), producing (M5) cancer in a mammal (by administering a lipid sin vivo), producing (M5) cancer and antigen to contact immunocytes in which adaptor proteins which inhibit T cell activated) and producing (M7) at edeleted or functionally deactivated) and producing (M7) at edeleted or functionally deactivated) and producing (M7) at uncuricidal T cell population are vivo in a mammal comprisered and tumouristered as functionally deactivated) and producing (M7) at uncurist Bacterial superantigens are co-administered or administered as function constructs with anti-tumour proteins or motife. The present constructs with anti-tumour protein which are condimistered as functional functionally deactivated in a condimistered as functionally and constructs or motife. The present incorporated into a fusion construct with a superantigen. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from the US patnet office website at "segdata.uspto.gov/sequence.html?DocID=2002017551"

GlnLeuThrProValAlaGluGluThrArgAlaArgLeuSerLysGluLeuGlnAlaAla 100
presence or absence of multiple haplotypic genetic variations in a preselected region of one chromosome of a chromosome pair. The method is also useful for determining the linkage phase between two adjacent loci. The method is fast, inexpensive and provides uncomplicated determination of haplotypes in nucleic acid fragments of varying length from 25-40000 base pairs. The present sequence represents the human appolipoprotein E (apoS) coding region nucleotide sequence, which is used in the exemplification of the present invention. Human apoE is located on chromosome 19913. N. B. The present sequence is not given in the appecification, but the coding sequence of apoE is referred to in Example 3 by Genbank accession number K00396
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGGCCCTCATGGACGACCATGAAGGAGTTGAAGCCTACAAATCGGAACTGGAAAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method for detecting the presence or absence of multiple haplotypic genetic variations in a preselected region of one chromosome of a chromosome pair comprises selecting nucleotide polymorphisms, suspected to occur in the preselected region, isolating a target nucleic acid (TMA) of the chromosome pair from a sample, and detecting the presence or absence of several polymorphisms, using designed oligonucleotide probes. The method is useful for detecting the

The method is used for increasing lipid efflux and reverse cholesterol transport in ocular tissue, preferably retinal pigment epithelium (RPE) and/or Bruch's membrane, in an individual afflicted with AMD or Stargardts disease (fundus flavimaculatus), and for treating macular degeneration. The present sequence represents a DNA encoding a human apolipoprotein E (GenBank Accession No. K00396)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to increasing lipid efflux from and reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   U; 0 Other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä

The present invention describes a method (MI) for identifying a nucleotaacide in a nucleic acid by means of fluorescence resonance energy transfer (FRET). MI comprises: (a) providing a first nucleotide to be conformation at least in the portion including the nucleotide to be identified in a single-stranded confaining the nucleotide to be identified, and a first received to be identified, and a first received immediately in 3' complementary to the sequence of the first nucleic acid immediately in 3' complementary to the sequence of the first nucleic acid immediately in 3' complementary to the sequence of the first nucleic acid immediately in 3' complementary to the sequence of the first nucleic acid immediately in 3' complementary to the sequence immediately in 3' complementary to the sequence immediately in 3' complementary to the sequence immediately in 3' complementary in 4' complementary in 3' complementary in 3' complementary in 4' complementary in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  294
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (cancer), and infectious diseases. This sequence represents apolipoprotein polymucleotide, a cell surface moiety, the DNA of which can be transfected into a cell with superantigen DNA to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40

                                                                                                                                                                                                                                                    The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cresponse. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic conditions to form one or more hybridisation complexes and comparising the plurality of cDNAs under conditions to form one or more hybridisation complexes with the level of the detected to hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and comparing comprision of target polymucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polymucleotides. The microarray for monitoring the diagnosis of an immunopathology, such as Crohn's disease, asthma, culcarative colitis, hyperecesinophila, irritable bowel syndrome, culcarative colitis, hyperecesinophila, irritable bowel syndrome, carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenic fragments. This sequence carcinogenet a human cDNA of the invention. Note: The sequence data for this patent did not form part of fram intent proponer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GlnLeuThrProValAlaGluGluThrArgAlaArgLeuSerLysGluLeuGlnAlaAla 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             354

P-PSDB; AEB86466.

Marker for screening for compounds influencing a gene or protein, for treating cartilage disorders, such as, osteoarthritis, comprises a polynucleotide or a complement to specific genes, or an antibody to its protein.

Claim 1; SEQ ID NO 13; 64pp; Japanese.

The invention relates to a novel marker for cartilage disorders. The marker consists of a polynucleotide sequence of 15 bases from the sequence of acetyl-Conzyme A acetyltransferase 1, Rev-ErbA-beta, Selenoprotein P, aquaporin 1, BMP-3b; FKS06-binding protein 1A, Selenoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or apolipoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or collippoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or collippoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or collippoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or collippoprotein B, acyl-con properties a detection method of a cartilage disorder; a disease marker for cartilage disease containing an antibody cartilage disorder using a protein sample from the subject, or a peptide from it, and the antibody as a label; screening for a material which controls expression of one of the genes above; screening for a material which which controls the activity or function of one of the proteins; and an agent to improve or treat a cartilage disorder which contains a substance controlling expression of the genes or activity of the proteins. The markers may be used as a probe or a primer, for diagnosis of conditions such as cartilage disorder, deficient healing of fractures, or in chondrocyte transplants. The screening methods are useful for identifying therapeutic compounds. This polymucleotide sequence represents the DNA encoding apolipoprotein E of the invention.
